Our IT Infrastructure solutions are the cost effective reliable secured solutions with support. We serve the Linux services in Chennai,Bangalore,total Tamilnadu and all over south India.

[The secured firewall dealers Chennai.](#)

The **firewall** is the build on hardware and software net security system in which, it acts as a defendable system to secure the internal network from another network.

"An ounce of prevention is worth a pound of cure."

Why do we need a firewall?

It is important that our internal network must be secured against the external networks. Some of our website server may get down due to inability of firewall security. We provide the best *firewall security* to all your LAN networks connected towards it.

The wall acts as full power packed barrier bridge between unsecured networks from secured networks. To protect our network from harms, hackers and virus, the best internet security firewall is needed.

We are the best dealers of *firewall service* with the effective and low cost and are expert in doing Nix base technology [Linux](#) mail server. To protect your network from other networks, we are not only providers but also protesters. Our company is located at Chennai and Bangalore covering all over south India. Email us or contact us for further details as mentioned below.

Linux [Migration](#)-Harden your desktop

In today's world, everybody is worried about the OS license issues because of that they are ready to go for Open source software, But only thing is that they are fear about the support from reliable IT Solution Provider and the customer's paradigm is Linux will not support all the softwares but equivalent software will be there like in the other os. We can save huge money for security products ,stable working condition and savings in cost.

But the customer afraid not to go for Linux OS because they don't know where to

start and some of the misconcepts. As we know any transformation normally takes place after rejection. But it should be worthwhile to go for Migration with the proper guidance and suggestion of IT Linux Solution provider.

We Nixbase Technology, study the customers IT Infrastructure , Network setup, OS and hardware details, applications and advice for migrations.

Linux Firewall with Proxy and Content Filter

The Internet is the Magic word and It has changed the world 360 degrees. When the Users connect to the Internet you are visible to the Hackers. Some of the personal users using a software firewall along with the antivirus. But in the case of SMBs or corporate, need firewall at the gateway. It is separating and Filtering the IT Traffic from the Internet cloud . The awareness is there in the User segment . Some of the smbs or some corporate know that but for reducing the IT Cost some smbs are not going for it, because of the hardware firewall cost and regular renewals of the firewall year after year.

Nixbase Technology provides the Linux based firewall solution in Chennai Tamilnadu and all over India.

This Linux Firewall is the Cost effective, Reliable and Stable Firewall. It has all the features like any other hardware firewall.

Firewall with Hardware unit

- **Protect your network to avoid hacking.**
- **Gateway level antivirus protection**
- **Control access to the Internet-unwanted website blocking**
- **Track internet usage**
- **According to the usage ,the user based download size can be restricted.or**
- **A download can be blocked.**
- **Monitoring the logs of the user's web access.**
- **Content based sites blocking**
- **Fail Over multiple ISPs is possible.**
- **Https blocking**
- **Connect to your office from anywhere -multiple places with security.**
- **Bandwidth Saving -It is a Squid proxy based firewall.**
- **No renewal charges.**
- **unlimited concurrent users.Demo can be given based on your request**

Centralized authentication and storage Management

Nixbase Technology developed and customized this solution in the name of open ads .This is the data security solution which is useful for smbs and corporate.

- Network powered by Open ADS
- Enjoy unlimited number of windows client connections
- Enforce customized Group Policy
- Enjoy Roaming Users profile

- Active Directory services (T) can be used.
- Centralized storage
- Easy Backup of official documents
- And more

Centralized server have the open source Linux which is interacting with the windows clients. This main system act as a storage and Authentication or The file storage can be Secondary unit -storage whereas the primary act as an authentication system. A single distributed data store requires less administration and duplication and improves the availability and organization of data.

Cloud computing

We do open remote computing solution, providing client access to remote displays and devices (e.g. Keyboard, mouse, audio). It provides a desktop like user experience, while trying to offload most of the intensive CPU and GPU tasks to the client. The basic building blocks of Spice are: It has his protocol , server and Clients.

Thin Client Solutions

Thin client or zero client is the common word which rules all over the world. But in the smb segment in India most of the people don't know about the thin clients or zero clients. Nixbase Technology Chennai creates awareness about the thin client and zero client features and benefits to the corporate and smbs.

The desktops are under utilized in the corporate and smbs .The p4 basic system is enough to do the basic application access or doing simple office documentation and accounts work.But The re-sellers promoting higher configuration systems to the customers which is not required for their application.

The thin clients or zero clients are enough to do the basic office applications, accounts, Java, oracle, C, C++, ERP, CRM, special customized application except Higher end Graphical applications. The thin client or zero clients can't support Some of the Graphical applications because of data can be accessed through LAN network.

The thin client or zero client is working in the RDP protocol ,windows on LAN connectivity or Virtualization technology through the software. Some of the companies are using only web based customized applications for their work process, the thin client are there with a browser without accessing the patent system. Thin clients with browsers are very economical for these types of companies.

Thin client server

According to the number of thin client and application thin client models and sizing of the server can be arrived.We are also dealing pxe boot thin clients according to the customer's requirement.The thin client can be used windows and Linux OS,in windows OS the thin client will work xp,windows 7,windows 2003 server OS,windows server 2008,windows server 2012.

We are the dealers and distributors of Enjay Thin clients,RDP thin clients,N computing thin clients in Chennai and all over Tamilnadu.We are serving the thin

client and zero clients solutions to Madurai,Trichy,Coimbatore,Vellore,Thirupur ,Karur,Tuticorin and Banglore.

The price of the thin client are depending on the application and the following factors are considered in the mind and calculated. But thin client or zero client can be purchased Rs.2500, we have to think about the quality and warranty when we are planning to purchase it.

Thin client or zero client is having lot of benefits as below.

- Power consumption.
- Antivirus cost can be reduced.
- OS cost can be reduced.
- Maintenance is easy.
- Stored in the single system and getting the backup is easy.
- Formatting the OS time can be avoided. Because there is no separate OS on the thin client.
- Stability.
